

XE28 60v 5600w Off-Road Power Scooter

\$1800

When it comes to e-scooters there's the ones you get at Walmart, which are good for the kids. But this is the full grown adult power scooter! I personally took one out and was blown away at how much power it had, 0-45 in seconds.... And that was with only one motor!!!! I hit the dual motor switch and was almost kicked off! Please, gear up when riding this electric transportation.

We're offering this power electric off road scooter for what it would cost for the battery pack alone! We got such a great deal and now we're passing it along to you.
